**RESEARCH & SCHOLARSHIP EXPERIENCE**

**ARCHITECTURAL PHENOMENOLOGY (current)**

This research looks at transformative experiences of the architecturally extraordinary. Methods include empirical testing, surveys, well documented case-studies, existing literature in a wide variety of disciplines (e.g., phenomenology, psychology, the visual arts, comparative religion, philosophy, neuroscience, etc.) and direct architectural experiences. By seeking to understand the profound aesthetics of built environments, this effort will cast light into (a) an area little known and probed of human experience, (b) what is 'ordinary' or 'normal' in our daily engagement of architecture, and thus (c) how to improve our appreciation, respect, design and planning of constructed and natural environments. For more information: <http://juliobermudez.com/alive/>

**VOLUNTARY ARCHITECTURAL SIMPLICITY — VAS (current)**

VAS is a disciplined, spirited, and committed study of one possible architectural response to the major challenges confronting us individually, socially, and globally. VAS seeks the minimal, the fundamentally uncomplicated, the direct and the conscious in order to voluntarily and critically resist the forces of today's unconscious materialism, empty consumerism, unnecessary complexity, pollution, and life in the fast lane. VAS research develops pedagogies, theories, knowledge and skills to support architectural methods, technologies, ethics, and vocabulary that support such agenda.
